Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Joel Armstrong (Reg. No. 36,430) on 8/28/07.

The application has been amended as follows:

IN THE CLAIMS

Claims 10 and 13 are cancelled.

In claim 15, line 1, "10" is changed to --12--.

The following new claims are added:

17. The holographic recording medium according to claim 2, wherein: the recording layer is sandwiched between two substrates; and the photosensitive protective layer is formed to cover the recording layer and the two substrates.

Art Unit: 2872

18: The holographic recording medium according to claim 12, wherein the two substrates are made of optical glass plates formed by dispersion, into an optical glass material, a light absorbing material for absorbing or reflecting light at least in the range of shorter wavelengths out of the ranges of longer wavelengths and shorter wavelengths than the certain range of wavelengths across the recording wavelength, and transmitting light in the certain range of wavelengths selectively.

The following is an examiner's statement of reasons for allowance:

Claims 1-9, 11-12, 14-18 are allowable over the prior art of record for at least the reason that even though the prior art discloses a holographic recording medium comprising a protective cover covering the recording layer, wherein the protective cover blocks UV light and transmits all non-UV light, or only transmits light within a certain range, the prior art fails to teach or reasonably suggest a holographic recording medium, wherein the photosensitivity of the recording layer to incident light falls in the vicinity of the recording wavelength from shorter to longer wavelengths, and the light transmittance of the photosensitive protective layer falls in the vicinity of the recording wavelength from longer to shorter wavelengths, as set forth by the claimed combination.

Chen (US 2004/0264356, Fig. 3) discloses a holographic data storage medium, wherein a photosensitive protective cover covering the recording layer prevents the transmission of UV light, whereas it allows non-UV light to pass through ([0021]), or allows the transmission of

Art Unit: 2872

light within a certain range ([0022]). However, nowhere does Chen disclose the photosensitivity properties of the recording layer.

Kushibiki (EP 0291928 A2, Fig. 1) discloses a holographic data storage medium, wherein the recording layers is provided peelably on a substrate whose light transmittance is higher than 30% in the visible range.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
